LeenTech Network Solutions

July 2024 – August 2024

Backend Developer

- Contributed as a backend developer in a team of five for the rapid development of Airis, an AI-powered smartbot system featuring multiple personas with specialized functionalities.
- Developed and maintained backend services using the Next.js framework, integrated with Vercel database services.
- Implemented OpenAI GPT-4o and DALL·E API integration to enable intelligent dialogue generation and AI-powered image creation.
- Assisted in prompt engineering to optimize chatbot responses and align outputs with intended personas.
- Collaborated with the team to ensure system scalability, performance, and seamless deployment.

Training & Certification

- Operating Systems Basics by Cisco Networking Academy
- Networking Basics by Cisco Networking Academy
- Philippine Coding Camp 2-Day Data Science Workshop
- SAP Business One - Fit Academy
- IT Specialist - Databases
- IT Specialist - Python

Projects

- **PartnAR** – An Augmented Reality business card system integrated with a CMS, enabling dynamic employee information and interactive engagement.
- **JConnect** - A real-time messaging platform using Socket.IO to enable fast, scalable, and interactive communication between users.
- **Voce** - A multilingual audio-to-text translator powered by OpenAI Whisper, Google Translate, and PyDictionary for seamless real-time translation.
